

# AIR DRIVEN VPM

## VPM PUMPING MODULE

The VPM VersaFlo, with its run dry protection, is designed for use with any compatible drive mechanism. Illustrated below are our standard variations available which make it one of today's most versatile pumps.

## VPM PNEUMATIC DRIVE

The VPM VersaFlo Submersible Pump, fitted with a powerful pneumatic motor which can be driven by any existing air supply, is designed for rigorous applications in mining, quarrying and construction.

## VPM HYDRAULIC DRIVE

Combined with the unique hydraulic motor, the VPM VersaFlo is capable of pumping in excess of 80000 litres/hr. Use it with electric or petrol driven power packs for complete portability, or drive it from the tractor's PTO to make it the ideal companion on the farm.

## VPM DIRECT DRIVE

Stackable vertical spindles, available in standard lengths, provide you with a highly efficient, long lasting, maintenance free pump for use in sumps and reservoirs in any industry.
